Here's a Have Adventures activity you can complete at any time you fancy this term.

Coral Reef City

Have you heard of a coral reef? It's a little bit like an underwater city. Thousands of creatures can live in a coral reef. They're found in clear and shallow tropical waters. Most people think a coral reef is made up of plants, but it's actually lots of tiny animals called polyps. When there are lots of them together they look like rocks.

We're going to find out what lives under the sea with this fun game.

1) The coral reef has a day and night shift of animals. Some animals only come out in the day and some only at night. It's time to check them out. Pop on your diving gear and make sure your masks are nice and tight. When you're ready take a deep breath, jump into the sea and swim around.

2) The fish keep swimming away. To blend in, you need to act like them.. Let's have a go at being like different fish

Parrotfish - have super strong teeth as they like to munch on coral, ouch! Their mouths are like a bird's beak. Move around like a parrotfish munching on food.

Butterflyfish - are looking for love. Find a partner, link arms with them and go on a swim around your space together.

Angelfish - have flat bodies and like to hide in small gaps. Try to make yourself as flat as possible while still swimming.

3) that's the day shift done, now it's time for the night shift.

Whitetip reef sharks - prowl the reef at night to find food. Swim around like a hungry shark looking for a meal.

Squirrelfish - come out of hiding at night and have massive eyes to help them see in the dark. Use your hands to make binoculars around your eyes while you swim around.

4) Wow, there are a lot of creatures in the coral reef. If you were in the reef, what kind of fish would you be? Swim around as that fish and write it's name below!!
